ACOUSTICAL WALL & CEILING PANELS

L300

REFLECTIVE WALL PANELS

L300 Reflective Wall Panels are used in applications where sound reflection is necessary to enhance room acoustics. These flat reflector panels are commonly installed in auditoriums, performing arts venues and houses of worship.

L300 reflective panels are frequently used in conjunction with L200 absorber panels. Combining both panels allow reflection and absorption of excessive sound, resulting in improved speech and sound quality.

L300 panels are constructed with a 1/2" or 3/4" MDF core and are available in a variety of sizes and thicknesses.
